

HERE BEGINS YOUR JILTIMATE VALUE

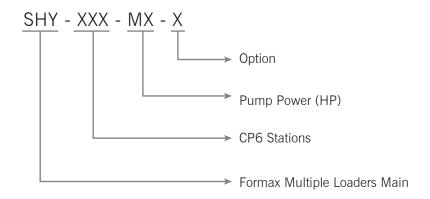

# **SHY** Series

Main Unit + Central Hopper Loaders

## Main Unit + Central Hopper Loaders

#### ■ Coding Principle

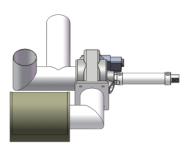

#### ■ Features

- One to Six material conveying can save a lot of cost.
- Dust collective chamber features a cyclone collector and a dust collection bin to reduce the load of the filter effectively.
- Separate dust collector is easy to clean.
- Main unit is equipped with faults and pump overload light to alarm quickly.
- Main unit equips the vacuum breaking valve to protect the pump.
- Alarm light is as standard
- CV series central hopper loaders can be mounted on IMM/Extruder directly.
- CE safety plug ensures safe and reliable operation

### ■ Options

The airflow with dust is rotating in high speed in the cyclone dust collector, under the function of centrifugal force, the dust is gathered upon the inner wall of the cyclone dust collector, and then upon the function of gravity, the dust finally falls down and comes out through the discharging hole. Rotated airflow is shrinkage to centre of hopper and then becoming secondary vortex flows out. It's effective to filter dust from hopper dryer and avoid of air pollution. The effect is up to 80% °

Vacuum Breaking Valve

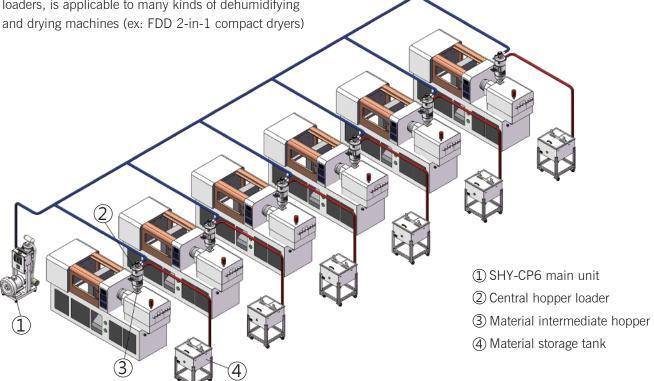

Cyclone Dust Collector

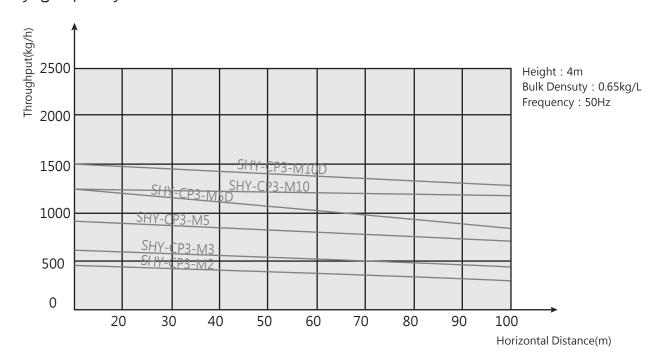

### ■ Application

"One to Six" central hopper loaders are designed and developed on the basis of three-phase single hopper loaders. They feature more functions, easy to operation, and convenient to install. This model, equipped with a high pressure pump and six C series central hopper loaders, is applicable to many kinds of dehumidifying

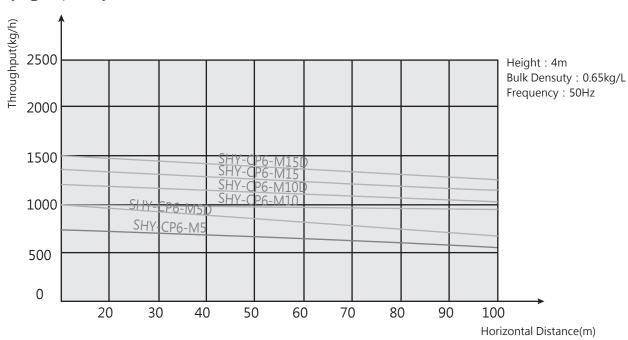

or one gravimetric blender (FGB) to process plastic materials. Besides that, it can also realize the "One to Six" way of conveying materials to different molding machines or hoppers for saving a lot of cost °

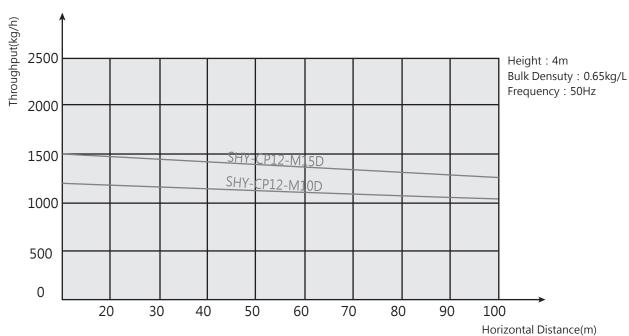

### ■ Conveying Capacity (SHY-CP3)
